Special magazines for friction feeders

As the expert for feeding and collating systems, Köra-Packmat develops constantly new feeder options that are in accordance with customers' specific requirements.

Here are some examples of special magazines we realized for different projects:

Fan-magazine: perfect for the stacking and separation of products that are folded or boosted on one side like brochures, cartons, folded leaflets.

Overview

- Fan-magazine
- Bended magazine
- Multiple magazine
- ➢ 5-fold magazine
- Autoloader

Bended magazine shaft to increase feeders' autonomy.

Discharge of the product stack.

Tapered construction for additional discharge of the product stack.

This special construction takes away the weight of the stack so that heavy and large format products (A4) can be separated easily.

For a customer we manufactured a feeder that is assembled with a multiple magazine where the shafts are built up consecutively.

→ Purpose: The magazines can be filled at the beginning of each production shift. The magazine shafts are emptied one after the next which increased the autonomy to such an extend that the feeder shafts only need to be refilled once in a shift in order to reduce man power.

Multipe magazine for small products (phone cards) to increase feeders' autonomy. The magazine is equipped with 5 shafts that are emptied automatically one after the next and convey the products to the feeder. The shafts are exchangeable so that they can be refilled "externally" without stopping the machine.
